

Product information

Instrument Disinfection POW(D)ER conc.

1500 ml	SUN420J
6000 ml	SUN420M

Characteristics

- Very good material tolerance with corrosion protection, also especially for the reprocessing of endoscopes
- Bactericidal, **tuberculocidal, virucidal and sporicidal** effect
- Very good material tolerance for endoscopes, manufacturer authorisations available
- Does not contain toxic borates or leave deposits on the instruments
- With active oxygen as the concentrate (based on peracetic acid). Very pleasant scent!

Product type

For the cleaning and disinfection of rotating & surgical instruments, as well as endoscopes of all kind.

Area of application

For the cleaning and disinfection of rotating & surgical instruments, as well as endoscopes of all kind.

Notes on application

The instrument disinfectant is a concentrate in powder form, which has to be diluted with water before application. To do so, use the enclosed dosing spoon (15ml = 10g; 30ml = 20g) to sprinkle the powder into the water (30°C water improves the dissolving process) and stir the solution several times for 15 minutes. The low amount of sediment which forms does not affect the disinfecting effect, but acts as a buffer. Then immerse the instruments into the solution in an open condition as soon as they are used. All surfaces and cavities to be disinfected have to be covered in full by the solution. The solution is to be exchanged every working day. After disinfection the instruments should be rinsed and dried thoroughly. A final rinse with demineralised water is recommended. Do not mix with cleaning agents or other disinfectants. Do not use devices made of copper, bronze or chrome or nickel-plated instruments with surface damage. Always keep the container sealed shut and store it in a cool place, protected from sunlight. Protect the packaging contents from moisture.

Chemical-physical data

Density: 0.65 g/ml

pH value: 8

Available containers

- High-quality packaging solutions on request, e.g. in 1.5 kg, 2 kg, 6 kg or 10 kg tubs
- Special containers on request
- Bulk containers

Certificates

Our products have been scientifically examined and tested in accordance with the latest methods. We will be happy to send you copies of our assessments on request.

Application times

Bacteria and candida albicans under dirty conditions (as per VAH, EN 13727, EN 13624, EN 14561 and EN 14562):

1.0% 5 min.

Tb bacteria deactivation (m. terrae) as per EN 14348 and EN 14563 (dirty conditions):

1.0% 5 min.

Tb bacteria deactivation (m. terrae) in accordance with VAH (dirty conditions):

2.0% 5 min.

1.0% 15 min.

M. avium as per EN 14348, EN 14563, VAH (dirty conditions):

2.0% 10 min.

Non-enveloped and enveloped viruses as per EN 14476 (adenoviruses, noroviruses and polio viruses), under dirty conditions:

2.0% 10 min.

1.0% 60 min.

Virucidal as per DVV/RKI under dirty conditions (polio, noroviruses, adenoviruses, polyoma SV 40 and vaccinia viruses):

2.0% 10 min.

1.0% 30 min.

Sporocidal as per EN 13704 (b. subtilis, b. cereus and c. sporogenes):

2.0% 10 min.

1.0% 60 min.

Sporocidal as per EN 13704 (c. difficile):

2.0% 5 min.

1.0% 30 min.

Fungicide as per EN 13624 (a. brasiliensis) under clean conditions:
